

Abstract Interpretation

Demo

Example Program

Example Program

A1_{entry}: { }

A1_{exit}: n => {ODD, EVEN}

Example Program

$A1_{\text{exit}}: n \Rightarrow \{\text{ODD}, \text{EVEN}\}$

$A2_{\text{entry}}: n \Rightarrow \{\text{EVEN}\}$

$A3_{\text{entry}}: n \Rightarrow \{\text{ODD}\}$

Example Program

$A2_{\text{exit}}: n \Rightarrow \{\text{EVEN}\}$

$A3_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A4_{\text{entry}}: n \Rightarrow \{\text{ODD, EVEN}\} (A2 \cup A3)$

$A4_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

Example Program

Round0:

$A0_{\text{exit}}: n \Rightarrow \{\}$

$A1_{\text{exit}}: n \Rightarrow \{\}$

$A2_{\text{exit}}: n \Rightarrow \{\}$

$A3_{\text{exit}}: n \Rightarrow \{\}$

$A4_{\text{exit}}: n \Rightarrow \{\}$

Example Program

Round1:

$A0_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A1_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A2_{\text{exit}}: n \Rightarrow \{\text{EVEN}\}$

$A3_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A4_{\text{exit}}: n \Rightarrow \{\text{ODD}, \text{EVEN}\}$

Example Program

Round2:

$A0_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A1_{\text{exit}}: n \Rightarrow \{\text{ODD}, \text{EVEN}\}$

$A2_{\text{exit}}: n \Rightarrow \{\text{EVEN}\}$

$A3_{\text{exit}}: n \Rightarrow \{\text{ODD}\}$

$A4_{\text{exit}}: n \Rightarrow \{\text{ODD}, \text{EVEN}\}$

General Algorithm

oldAnalysisMap = **NULL**

analysisMap = **initialAnalysis**()

while(! **fixPointReached**(analysisMap, oldAnalysisMap))

{

 oldAnalysisMap = analysisMap

updateGraphAnalysis(analysisMap, Function)

}

Fixpoint Check

```
bool fixPointReached(analysisMap, oldAnalysisMap)
{
    if (oldAnalysisMap.empty() ) return false;
    for (  $I_1 \in \text{analysisMap}$  &  $I_2 \in \text{oldAnalysisMap}$  )
        if (  $I_1 \neq I_2$  )
            return false;
    return true;
}
```

Update Graph Analysis

```
void updateGraphAnalysis( analysisMap, Function ){  
    for (BB ∈ Function){  
        OldAnalysis = analysisMap [BB];  
        EntryAnalysis = emptySet()  
        // Load the stored analysis for predecessor nodes  
        for (p ∈ pred_begin(BB) )  
            PredSet = applyGuard ( analysisMap[ p ], p )  
            EntryAnalysis = union_analysis( entryAnalysis, predSet )  
        NewExitAnalysis = updateBBAnalysis(BB, EntryAnalysis)  
        if ( OldExitAnalysis != NewExitAnalysis )  
            analysisMap [BB] = union_analysis(OldExitAnalysis, NewExitAnalysis)  
    }  
}
```

Update Basic Block Analysis

```
Set updateBBAnalysis (BB, predSet){  
    for (Ins  $\in$  BB){  
        if (Ins is storeInst) // Update predSet accordingly  
        if (Ins is loadInst) // Update predSet accordingly  
        if (Ins is cmpInst) // Update predSet accordingly  
        if (Ins is binaryInst) // Update predSet accordingly  
    }  
    return predSet  
}
```
